Speech Access

Responder - Speech Access

Get the notification you need with Responder! A machine-vision-based automated monitoring system, Responder provides a continuous watch on electronic equipment. Systems such as alarm panels are monitored by Responder, providing notification through speech output or other optional methods.

It "watches" your equipment, 24 hours a day, 7 days a week. When an event such as an alarm occurs, Responder lets you know by using recorded and/or synthesized speech over loudspeakers, public address systems, and telephone systems and modems. Not only does it notify you, but it also keeps a log of all events, keeping check of the operational status of equipment being monitored. The entire system is unobtrusive, requiring no modification, access, or contact with existing equipment.

From Simple to Complex ... or Customize

Responder can react to various types of events, can handle simple to complex equipment monitoring, and can be customized to meet a facility's specific needs. For demanding environments, multiple Responder systems can be deployed. However, you only pay for the Responder configuration that meets your current requirements. At any time, you can expand your Responder installation to accommodate your needs!

Versions to fit your organization

Responder M1

Consisting of a single computer and from 1 to 4 monochrome (black and white) digital cameras, Responder M1 is the standard Responder system. It provides speech enabled automated monitoring suitable for most environments where notification is required only for on/off type alarms.
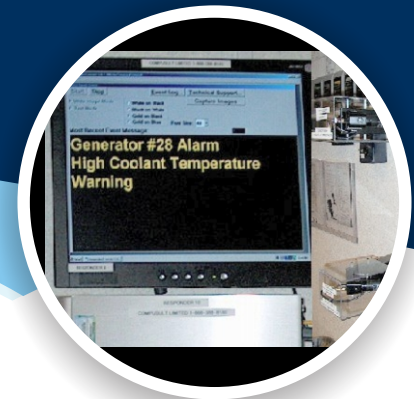

Responder C1

Responder C1 is the color Responder, offering the same capabilities as the M1, but also provides notification of alarms and/or events by differentiating between colors.

There are also combinations of Responder M1 and C1, networked together to provide a complete automated monitoring solution for even the most demanding situations.

Responder runs on IBM compatible PC's under Windows NT and Windows XP.

Proven Success

Responder is a proven assistive technology solution for facilities employing blind and visually impaired workers. Responder systems are currently installed in medical centers across the United States. Here, blind employees can independently respond to these situations as a routine, but also critical part of their work.

- *Speech-enables large groups of electronic indicators, such as alarm panels*

- *Enables blind and visually impaired employees to work in security and monitoring environments*

- *Unobtrusive installation*

- *Highly customizable and scalable to meet your needs*
