Safety, Maintenance, Asset Record Tracking Program (SMARTPro)

SMARTPro

Safety, Maintenance, Asset Record Tracking

Innovation: Finding a better way of conducting safety and maintenance inspections was a driving factor behind the development of SMARTPro. The outcome of combining REL's technical expertise in asset safety/maintenance inspections with Compusult's software engineering and design expertise is a state-of-the-art software solution for ensuring the safety of personnel and asset integrity, which will also enable clients to address and verify legislative compliance issues, improve productivity and competitiveness and ensure overall asset integrity.

Safety, Maintenance, Asset Record Tracking Program (SMARTPro)

Versatility - SMARTPro has the ability to be adapted and/or changed to meet the specific requirements for any inventory item being inspected (buildings, bridges, towers, trucks, buses, trains, equipment, Personal Safety Gear, etc.). SMARTPro has the ability to link GPS coordinates, pictures, employee email addresses, comments, actions required, etc. to an inspection and/or inspection item. This versatility improves SMARTPro's other advantages with respect to productivity, accountability, verification and data trending.

Productivity - SMARTPro has the ability to increase overall productivity by decreasing the level of manpower time required to complete an inspection and generate a formal written report instantly. Inspection items are already checked as "In Compliance". Only items that are "Deficient" are required to be checked. SMARTPro is designed with simple pick and click features to reduce the time and effort required to "fill out" forms. SMARTPro generates a complete formal report with findings, pictures, and GPS coordinates with the click of a button. No need for the employee to spend time preparing written reports after the inspection.

Safety, Maintenance, Asset Record Tracking Program (SMARTPro)

Accountability - SMARTPro has the ability to make individuals accountable. Deficiencies identified during an inspection can be assigned to specific individuals (via email address link), outlining required action to be taken and date to be completed. The deficiency can also be linked to Supervisory personnel notifying them of the deficiency, the person(s) assigned for corrective action, the date to be completed to ensure they are held accountable.

Verification - SMARTPro has the ability to provide formal verification that deficiencies have been identified and corrected. If the deficiency is not corrected by the date assigned, a second email will go to the person(s) assigned notifying them of the “Outstanding” deficiency. The supervisory personnel will also get the same email for follow up with the person(s) assigned.

Safety, Maintenance, Asset Record Tracking Program (SMARTPro)

Data Trending - SMARTPro has the ability to mine the data entered through multiple inspections to generate trending reports that are vital for determining anything from the life expectancy of assets, (i.e, bus or truck) worker practices, (i.e, frequent replacement of brakes on a particular bus may be linked to the poor driving habits of the driver) or component deficiencies (i.e, all buses are experiencing the same deficiencies linked to a faulty component provided by the manufacturer – warranty recall), etc.

Platform Stability & Processing - SMARTPro is available for both Apple and Android devices. Data can be collected in offline mode (inspection can be carried out even if cell or Wi-Fi connection is not available) and synced to the server when a connection is available. This feature allows data collected to be presented in real time for use and trending by operations and maintenance personnel or sr. management.

Data Security – SMARTPro data servers are housed in a secure facility and all transactions to the servers are encrypted, stored, and backed up according to industry and government standards. Access to SMARTpro is password protected.

Safety, Maintenance, Asset Record Tracking Program (SMARTPro) *Deficiency Details - Inspection Final Report*

Unsafe Conditions

Inventory ID: Ford Escape
Description: Blue
Deficiency: Cab Cleanliness - Substandard
Deficiency Type: conditions
Action Taken: Deficiency to be corrected in 92 days.
Notify Employees: Bruce Rogers, Wylie Butler
Employees Involved:
Comments: Needs to be cleaned.

[Select to see Item History](#)

Each component/item checked as being deficient will have an attached summary of the deficiency, action to be taken, individual(s) assigned, date to be corrected and any comments from the inspector.

SMARTPro Pricing

SMARTPro is offered as a Software as a Service (SaaS) solution, accessible via any web browser, as well as most mobile devices equipped with the SMARTPro app. There are no charges for the software under this model. The fee structure (excluding applicable taxes) is outlined below.

Licensing/Usage Fee

The license/usage fee is \$2,900/month (with a minimum one-year subscription).

Support

SMARTPro support is included in the above monthly fee, based on a maximum of five (5) hours per month between the hours of 7:00 a.m. and 4:00 p.m. Eastern Time, Monday to Friday, excluding company holidays. Additional support beyond five hours per month can be provided at a cost of \$100/hour. Extended support outside the standard hours is also available at additional cost.

Maintenance

SMARTPro maintenance is included in the above monthly fee.

Training

SMARTPro training can be provided remotely via web conferencing or on-site.

- Remote training costs \$1,000/day
- On-site training also costs \$1,000/day, excluding travel and living costs.

Two days of training are typically required for standard users.

An additional day of training is required for system administrators.

Implementation Fee

Typical SMARTPro system implementation costs are \$26,000, assuming provision of ten inspection or other form templates and initial user and item/inspection data set-up.

Customization

SMARTPro customization services can be provided for \$1,000/day. Actual customization efforts are quoted on a firm, fixed-price basis once customization requirements have been reviewed and confirmed.

Other Costs

If required, any additional services necessitating on-site meetings will involve associated personnel labour and travel and living costs. Actual costs are quoted on a firm, fixed-price basis once additional service requirements have been reviewed and confirmed.

The Companies behind SMARTPro

Rogers Enterprises Ltd. (REL) (<http://www.safetyexperts.ca/>) is a full service provider of health and safety consulting and training. The company was incorporated in 1977 and established its Health and Safety (H&S) division in 1993. REL's professional portfolio is diverse and offers a complete range of H&S services to its clients including consulting, project management, training, and industrial hygiene. REL has the depth of resources to provide junior, intermediate, and senior consultants possessing a broad range of qualifications and experience in health and safety, as well as extensive knowledge of associated legislation. REL staff includes Canada Registered Safety Professionals (CRSPs), Safety Engineering Technologists (SETs), and a Certified Industrial Hygienist (CIH) who are experienced, capable, and disciplined in their field.

COMPUSULT

Compusult Limited (<http://www.compusult.net>), an Information Technology company that's been in business for over 30 years, developed SMARTPro for REL. Compusult has 20 years of experience in developing, deploying, and hosting solutions for applications such as inspections, inventory control, asset management, and item check-in/check-out. Compusult also has extensive experience providing web and mobile solutions to clients such as the U.S. Department of Defense (DoD), Canadian Department of National Defence (DND), Natural Resources Canada (NRCan), U.S. Geological Survey (USGS), NASA, and many others.

REL and Compusult partner to provide a complete SMARTPro solution for all your inspection needs. SMARTPro is a comprehensive and complete software system for implementing and managing any environmental, health, safety, or other inspection and compliance/conformance assessment processes an organization must follow. The Inspection Form Manager module lets you create (and modify as required) any type of inspection form and data fields for auditing and inspection purposes, which can be linked to associated legislation added via the Legislation Manager module. This includes field audits and workplace evaluations. The Deficiency Manager lets you add, update, and delete unsafe acts and conditions. Available reports include individual inspection results and updates, plus operational and deficiency trends.
