

## Who We Are

Compusult is a diversified information technology company with over 30 years experience in software development and is a leading provider of interoperable, geospatial software solutions. Compusult's flagship product, Web Enterprise Suite, is a complete, end-to-end system providing standards-based geospatial interoperability and the most comprehensive data discovery and management solution available.

Compusult provides many other value-added products and services such as custom and commercial software, systems integration and consulting, assistive technology solutions for persons with disabilities, solutions for asset tracking and inventory control, electronics system design and fabrication services, tender management services and consulting. Compusult is also a developer of marine and oceanographic systems, and designs and fabricates custom and commercial electronics.

Compusult currently operates out of its head office in Mount Pearl, Newfoundland, with branch offices in Halifax, Nova Scotia and Ottawa, Ontario, Canada, as well as a U.S. subsidiary in Chantilly, Virginia.

## Total Quality. Total Commitment.

Compusult is **ISO 9001:2008** certified and is committed to providing tools and systems that make our lives easier and help us make better, faster decisions in critical situations.

At Compusult, we bring products and services to our customers through innovative teamwork and by placing the highest priority on our clients' requirements. We deliver reliable, affordable and feature rich software and hardware. We have a wide range of innovative software and electronics products marketed internationally, with primary markets in the United States, Canada, Europe and the Pacific Rim.

Compusult is committed to designing, developing, procuring and servicing products to a quality level which meets or exceeds our customers specifications and requirements.

## Complete Solutions for:

- ✓ Geospatial Data Management and Decision Support
  - ✓ Data Discovery and Delivery Systems
  - ✓ Geo Web-portal Development and Deployment
  - ✓ Media Data Management for Law Enforcement
  - ✓ Geomatics and Geographic Information Systems
  - ✓ Electronics Design, Engineering and Manufacturing
  - ✓ Systems Integration and Design
  - ✓ Ocean Observing Systems
  - ✓ Geospatial Marine Solutions
  - ✓ Asset Management Systems
  - ✓ Custom Software Development
  - ✓ Advanced Data Communications
  - ✓ RDBMS Integration

## Geospatial Data Management and Decision Support Solutions

Compusult's flagship product, Web Enterprise Suite (WES), is the complete software solution for geospatial data product discovery, access, delivery and publishing via the Web. Its interoperable technology and highly advanced, tightly integrated, standards-based components provide all the functionality required to discover, publish, visualize, manage and distribute data to end users in the field or on the desktop.

These components include a variety of unique, interoperable software packages and tool kits providing geospatial portal development; Internet mapping; metadata management; comprehensive data connectivity and Interoperability; gateway creation; and much more. WES is ideally suited and currently deployed for many defence, emergency response and Big Data applications.

## Asset Tracking and Inventory Control Solutions

COMPUSULT's FasseTrack is a fielded, commercial Off-the-Shelf (COTS) software solution for asset tracking, inventory control, item check-in/check-out and more, built upon the latest technologies for desktop and mobile systems. It is ideal for defense and government agencies, high-tech companies, hospitals, educational institutions and any organization that needs to accurately manage capital assets and consumable items.

FasseTrack has been the system of choice for defense and other organizations in the United States, Canada, Europe and the Caribbean.

## Electronics System Design and Fabrication Services

Compusult has a certified team of Electrical Engineers and Technologists and a complete electronics design and fabrication facility that is utilized on a daily basis for manufacturing commercial electronics. Our facilities support low to medium volume production in accordance with MIL-SPEC requirements and DND procedures and documentation standards.

Compusult's team has extensive experience in the design and fabrication of electronic products, development of associated firmware and programming state-of-the-art microcontrollers. We have been providing these services to various defense, marine, and other clients for over 17 years. Specializations include LED display systems, marine electronics, data communications systems, computer access and control devices, and systems integration projects.
